Player 5.7 | Transforms exploration data into insights - faster & smarter

GIS PAX
SOFTWARE | CONSULTING | TRAINING | PROJECTS
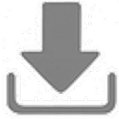

Import Data | Turn Data into Ready-to-Use Insights
Seamlessly load data from any structured database into *Player* and instantly generate loading files, building your custom workflows.

Export Data | Share Insights in Seconds
Export your data with a single click to Excel, ready to share with your portfolio team or senior management, no extra formatting required.

Dashboard Integration | Insights Without Boundaries
Harness the free GIS-Pax PowerBI template to deliver portfolio insights from your Player projects, even to those without ArcGIS.

Updated Data Model | More Flexibility, Less Friction
Say goodbye to unique well or field name requirements and hello to development status of pools (e.g., stranded discovery).

Dive Deeper into Your Data | Analysis at the Speed of Thought
Generate post-drill analysis charts in seconds to summarise key petroleum system elements within your AOI.

Connect the Past with the Future | Predict with Confidence
Leverage creaming curves, field size distribution charts, and more to benchmark your prospect data against historical data.

Multi-Scenario Analysis for YTF | Model Every Possibility
Duplicate evaluation areas to toggle different "what if" scenarios, from new pipelines to strategic development zones.

Improved QwikVol Workflow | Track Prospect Evolution
Clone QwikVol evaluations to maintain a complete volumetric history for every prospect.

AVO Success Rate Insights | Smarter Exploration Decisions
Wonderwall now displays Bayesian uplift factors, based on real-world AVO exploration success rates.
